Chapter 1

README

v3.0

Realokacijų skaičius vienodas std::vector ir [Vector](#) klasei:

Atlikti std::vector vs [Vector](#) testai, užpildant vektorius 10000, 100000, 1000000, 10000000, 100000000 elementų push_back() funkcija. Pagal visus testus ir jų vidurkj, greičiau užpildomas naujai sukurtas [Vector](#) klasės vektorius. Ištestuoti [Vector](#) klasės metodai:

```
5 Vector klasės metodų pavyzdžiai: //1 void push_back(const T& value) { if (size_ == capacity_) { reserve(capacity_←
_ == 0 ? 1 : capacity_ * 2); } data_[size_++] = value; }
//2 void push_back(T&& value) { if (size_ == capacity_) { reserve(capacity_ == 0 ? 1 : capacity_ * 2); } data_[size_←
_++] = std::move(value); }
//3 void pop_back() { if (size_ > 0) { --size_; } }
//4 void clear() { size_ = 0; }
//5 void assign(T* first, T* last) { clear(); size_t new_size = last - first; if (new_size > capacity_) { reallocate(new_←
_size); } for (size_t i = 0; i < new_size; ++i) { data_[i] = *(first + i); } size_ = new_size; }
```

main.cpp:

Menu su galimais pasirinkimais:

- 1 - Konstruktorius
- 2 - Destruktorius
- 3 - Copy constructor
- 4 - Copy assignment operator
- 5 - Move constructor
- 6 - Move operator
- 7 - Input operator
- 8 - Output operator
- 9 - studentų grupavimas ir išvedimas į failus

9.1 - įvesti duomenis ranka

9.2 - generuoti duomenis

9.3 - nuskaityti duomenis iš failo

Kompiuterio parametrai: CPU - Apple M3 RAM - 16 GB SSD - 494,38 GB

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Vector< T >	10
Zmogus	11
Studentas	9

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Studentas	9
Vector< T >	10
Zmogus	11

Chapter 4

File Index

4.1 File List

Here is a list of all documented files with brief descriptions:

student.h	13
utils.h	14
vector.h	16

Chapter 5

Class Documentation

5.1 Studentas Class Reference

Inheritance diagram for Studentas:

Public Member Functions

- **Studentas** (const [Studentas](#) &other)
- [Studentas](#) & **operator=** (const [Studentas](#) &other)
- **Studentas** ([Studentas](#) &&other) noexcept
- [Studentas](#) & **operator=** ([Studentas](#) &&other) noexcept

- string **pavarde_**

5.1.1 Member Function Documentation

5.1.1.1 pavarde()

string Studentas::pavarde () const [inline], [override], [virtual]
Implements [Zmogus](#).

5.1.1.2 setPavarde()

void Studentas::setPavarde (
const string & pavarde) [inline], [override], [virtual]
Implements [Zmogus](#).

5.1.1.3 setVardas()

void Studentas::setVardas (
const string & vardas) [inline], [override], [virtual]
Implements [Zmogus](#).

5.1.1.4 vardas()

string Studentas::vardas () const [inline], [override], [virtual]
Implements [Zmogus](#).

The documentation for this class was generated from the following files:

- student.h
- student.cpp

5.2 Vector< T > Class Template Reference

Public Member Functions

- **Vector** (size_t size)
